```typescript
export interface ComponentTestFixture<T> {
  compile(componentParameters?: Partial<T>): Promise<void>;
  detectChanges(checkNoChanges?: Boolean): void;
  get(type: Type<any> | InjectionToken<any>): any;
  readonly instance: T;
  readonly componentInstance: T;
  readonly componentRef: ComponentRef<T>;
}
```

```
export function createComponentFixture<T>({
  component,
  shallow = true,
  ...testModuleMetadata,
}: TestModuleMetadata & {
  component: Type<T>;
  shallow?: boolean;
}): ComponentTestFixture<T>;
```
